

Since 1976, Gryphon has been a pioneer in the production of diamond band saws.

The AquaSaw is a corrosion resistant version of our famous C-40 band saw. The AquaSaw adds to the rugged design of the C-40 by incorporating additional use of stainless steel and hard anodized aluminum to resist the formation of salt water corrosion. A special shield and sealed bearings are added to prolong motor life. A stainless steel blade is provided on this model to insure that there is no adverse reaction between the coral and the blade. The AquaSaw is available in standard or extended height versions, as well as 115v or 230v.

## Specifications
